Review

"[A] fascinating book. . . Longino has clearly articulated the methodological plurality of research on human behavior." (Erika Lorraine Milam, Princeton University Science)

"In her groundbreaking book . . . Longino looks closely at a variety of scientific approaches to the study of human aggression and sexuality to argue that there is no one right way to divide nature from nurture within the scientific approaches to the study of behavior, and that the nature/nurture dichotomy reinforces and reflects an undue emphasis on explanations that focus on the dispositions of individuals rather than those that look at patterns of frequency and distribution of behavior within populations." (Carrie Figdor New Books in Philosophy)

"[An] important contribution to the philosophy of the science(s) of human behavior. . . . [T]his is a must read for philosophers of science and behavioral scientists. . . . Recommended." (R. F. White, College of Mount St. Joseph Choice)

"Longino has done the philosophy of science a service by providing a nonpartisan assessment of the many scientific approaches that study the nature and nurture of human behavior. She convincingly shows that we need not pick winners and losers among the approaches, but rather can think constructively about the relationship between those approaches." (James Tabery Metascience)

"Overall, this book offers a useful overview of a number of scientific approaches to investigating human behavior and a thorough examination of the existing concerns with each approach. Longino's treatment of the different ways these approaches parse the causal space is illuminating for those interested in the sciences of human behavior, and also as a case study of how multiple approaches address a phenomenon in very different ways that are not easily reconcilable." (Angela Potochnik, University of Cincinnati Notre Dame Philosophical Review)

"Worth reading for anyone interested in feminist philosophy of science, philosophy of biology, or social epistemology. Longino demonstrates an impressive and comprehensive engagement with the relevant science, a careful and thorough use of that scientific literature to advance an account of the pluralism and partiality of knowledge claims based in different scientific disciplines, and, finally, an approach to the sciences of behavior that has important feminist and liberatory implications. We hope this book makes it to your shelves and stimulates further feminist work in the scientific terrain Longino has so rigorously charted for us." (Sarah Weaver and Carla Fehr *Hypatia: A Journal of Feminist Philosophy*)

"Studying Human Behavior offers a groundbreaking account of the sciences of human behavior. Longino's detailed analysis of how each science investigates and explains behaviors associated with aggression and sexual orientation shows that each has more limitations than champions acknowledge and each has more power than critics grant. At a time when science is being dismissed by some and elevated to a religion by others, this book provides a model of how empirical knowledge should be examined and understood."
(C. Kenneth Waters, University of Minnesota)

"Longino presents many insights about different general methods, assumptions, research goals, and the importance of definitions in researching behavior. I know of no other book that covers such diverse approaches."

(Peter Machamer, University of Pittsburgh)

"Rather than taking sides in the nature/nurture debates, Longino floats above them, beautifully illustrating what philosophers do best, laying out the complexity and interrelationships among different research approaches to human aggression and sexuality. For example, she examines the ways that various biological and social fields describe behaviors, illuminating how moral values and folk psychology get infused into the deepest research concepts from the start. An extremely thoughtful, careful, and fascinating book, accessible to all those interested in the foundations of behavior." (Elisabeth Lloyd, Indiana University)
