From the Publisher

Sampling (the removal of a small amount of material from a larger volume to test it for a desired characteristic) is important to industry in order to monitor the progress of a reaction or the quality (purity) of a product. To ensure that the sample is representative of the larger volume, certain procedures need to be followed in removing the sample and statistical interpretation of the data. An example of sampling would be determining the purity of a train boxcar load of fine clay by several small samples representative of the bulk. Pierre Gy is one of the leading sampling experts in the world and Sampling for Analytical Purposes is an abridged version of his previous French works. The title is a simple guide to sampling method for practicing analysts who do not want to search through larger and more complex titles. This title responds to a shortage of books on large scale process chemistry.
