Review

Review from previous edition: "This is a masterful, very recommendable study on the building of nuclear expertise - not only since the catastrophes of Chernobyl and Fukushima a topic of prime importance to scientists and technologists, professionals, politicians, and in fact to all of us. Historiographically Johnston combines social and cultural history with labour and political history, successfully weaving in insights from science and technology studies and from a practice-oriented history of science and technology. His book will become a classic for all of these fields." --Klaus Hentschel, Historical Institute of the University of Stuttgart

"I enthusiastically recommend this fascinating study of nuclear engineering, which documents its development from its diverse origins in secret laboratories in the United States, Britain, and Canada during the Second World War, through its vital transformation in the international political arena during the first postwar decade, and culminates later in its maturation as a discipline through the commercialization of nuclear power, each stage of which entailed profound scientific, technical, institutional, educational, and sociopolitical consequences that affect our lives today." --Roger H. Stuewer, University of Minnesota
