Review

1993 This work is truly international, being compiled by more than 250 authors from 15 countries. The editors and publisher are to be congratulated on bringing together so many individual contributions into a cohesive work, which will be a boon to organic chemists for years to come. -- Chemistry in Australia

Essential for all industrial and academic chemistry libraries serving advanced undergraduate and graduate systems. -- H.T. McKone, Saint Joseph College, Choice

January 1993 'I gazed and gazed but little thought, what wealth to me the show had brought'. What daffodils did to Wordsworth, this treatise did to me. Wordsworth saw 10,000 daffodils at a glance. Here I saw nearly 10,000 pages of text and 9000 references, together with an abundance of beautifully drawn structures and reaction schemes; here I shared the enthusiasm of over 250 distinguished chemists from across the globe as they unfurled the art of modern organic synthesis in nine fat volumes. This vast undertaking has been supremely well organised, employing internationally renowned synthetic chemists as editors.... This series presents a refreshing overview of modern synthetic methodology and provokes many tantalising questions and thoughts.... Anyone who synthesises organic compounds must have access to them. -- R.M. Scowston, Chemistry in Britain

October 1992 Essential for all industrial and academic chemistry libraries serving advanced undergraduate and graduate systems. -- H.T. McKone, Saint Joseph College, Choice
